HELPFUL HINTS
After referencing in the needed files on this sheet place a fence boundary on the outside limits of these files that you want to be visible on this sheet. Then clip each reference file to turn off the display of elements outside the fence boundary.

HELPFUL HINTS
Currently a linear pattern is being used for the centerlines. The patterns that are contained in the right of way cell library all start at a 500 foot interval. When patterning the centerline you must adjust the line so that it starts at an even 500 foot interval. For example if the centerline starts at 12+30.00 your line work will need to start at 10+00.00 before you can pattern it correctly. Once patterned you can delete from 10+00 to 12+30. Also you will need to create separate centerline segments at each equation station so that the tick marks will line up properly. Each centerline segment needs to be made into a complex chain so that it will be patterned as one continuous element.

REFERENCE FILE
--rw---_pln.dgn
Attachment: Coincident

Cell Library: RW.V8.cel
Linear Pattern:
RWXCLT, RWNCLS or RWNCL
Cycle: Truncated
Scale: 1.000
Tolerance: 0.010
LV=220, 226 or 227
CO=20, 26 or 27
LC=0
WT=0 (Underlying element)
The underlying element needs to be on the correct level for the centerline being patterned.
